Freight Charge Quotes

PRINT THESE INSTRUCTIONS FOR EASY REFERENCE

Easily calculate your shipping cost with this quick link and the following instructions.

Cabinets and carts are shipped by common truck carriers on semi trailers. Every commodity in the motor freight transportation industry (from ingots to widgets) is classified using a standard NMFC (National Motor Freight Classification) Code. Each level is priced according to that class. Most of Nelson's refrigeration carts and equipment is shipped under class 92.5. The freight rate is also determined by the weight and the distance of the shipment.

The following link will take you to our preferred freight carrier's website where you can estimate the transportation cost of your Nelson equipment.

You will need:

- 1) our factory location zip code as the origin **43449**
 - 2) your **destination zip code**
 - 3) the NMFC Class of **92.5**
 - 4) and the **weight** of your shipment, found on the price list for most products
- *The rate program allows you to choose **residential** (for an added fee)*and **lift gate** service when needed.

Hit **SUBMIT FORM**. The site will give you standard delivery charges and some expedited and guaranteed service options.

As a **special bonus** to our customers, we can discount your quote by up to **40%**, just ask.

ADDITIONAL GOOD TO KNOW STUFF ABOUT SHIPPING

A commercial to commercial delivery is the best option. A commercial location will have access for a tractor trailer to enter, turn, make the delivery, etc. The commercial location should ideally have a fork lift truck or a freight dock at the site. A lift gate service is available in most areas for a fee. Lift gate is a service where the carrier brings your shipment on a truck with a tailgate that lowers your freight to the ground level. If you elect a residential shipment, there will be a delay in the delivery until the carrier can contact you and make arrangements.

Please note that carts larger than 7' may not be able to use lift gate service

The carriers job is finished when he gets to your location. It is not his responsibility to unload the freight or to move the freight inside. In some places indoor deliveries are available for an extra charge, but they only move the equipment in the door, not into place.

It is the customer's responsibility to inspect the shipment before signing for it. If there is cosmetic damage such as a ding or dent, note it on the delivery receipt when you sign for the freight. If it is noted and cosmetic only, we will assist you in filing a claim for small damage and forward the discount to the receiver. Do not accept freight that is heavily damaged. You have the right to refuse the shipment if the damage is severe. In this case, the carrier will return it to the shipper. We will repair or replace and file a claim with the transportation company. If you accept damaged freight, there is no recourse for either party.

There are many other freight carriers to choose from, however this carrier covers most areas of the country at a reasonable negotiated discount. Some areas may not be serviced. This link is intended for your convenience, only.
